

Emotion : angry

Text of the speech : i feel so selfish but i know it has to be done

Speaker Baseline 

Average Pitch: 226

Average Energy (RMS): 0.008

Average Spectral Centroid: 1885

Thinking

Of course! Crafting the perfect emotional delivery requires a deep understanding of how pitch, energy, and timbre coalesce to create a specific feeling. For an angry tone,To capture this, I've broken the sentence into two distinct prosodic events.

1."i feel so selfish": This first segment will embody the rising frustration. We'll see a dramatic surge in pitch and energy, reflecting a sharp increase in agitation. The vocal quality will become tense and bright, as if the speaker is straining against their own feelings.

2."but i know it has to be done": Here, the anger shifts to forceful determination. The pitch remains high but begins a steep, decisive fall, signaling a final, non-negotiable conclusion. The energy will peak here, representing the forceful delivery of the phrase "has to be done," leaving no room for argument.

Below is the structured JSON representation of these features.for an angry performance.
